

## Marajet DI-R: A Multitude of Outstanding Features

The Compatible Solution for Roland Printers, the Bestseller in the Wide Format Segment

9<sup>th</sup> Feb

The tendency towards high resolution printers is uninterrupted as well as the demand for compatible inks. Through their integrated print-and-cut possibilities, the Roland printers have established an outstanding market position. With the mild Marajet DI-R, we present the first solvent-based ink generation for the Roland printers which combines a multitude of exceptional characteristics.

Marajet DI-R combines good light fastness, high colour density, and a wide colour gamut in an unexcelled way. In order to ensure an optimal ink-print head compatibility a super-fine pigment quality was chosen.

### Applications

Marajet DI-R was especially developed for Roland printers such as the well-known

VersaCamm and Soljet models. Further Roland printers processing EcoSolMax can easily be converted to Marajet DI-R.

The substrate range includes different types of PVC self-adhesive foils (monomer, polymer, and cast foils) as well as PVC coated substrates like banner and tarpaulin materials, coated and uncoated textiles, and suitable papers.

Due to the high-quality pigmentation, a light fastness of 3 years is achieved on corresponding high-grade foils. It can further be increased up to 4 years through an additional varnish overprint.

Outdoor prints which are subject to mechanical stress, like graphics on cars, require an additional lamination or varnish for mechanical protection.

### Main characteristics

- High colour density offering a wide colour gamut
- Mild solvents
- High-quality long-life pigmentation
- Excellent light fastness
- Vast substrate range

### Your Advantages

- Brilliant colour shades (especially reds and greens)
- Very wide colour gamut
- Low odour
- Best suited for indoor as well as long-term outdoor applications
- Good chemical and mechanical resistances
- Universal application possibilities due to a great number of substrates

## Marajet DI-R: A Multitude of Outstanding Features

The Compatible Solution for Roland Printers, the Best Seller in the Wide Format Segment

### Processing and bulk systems

Marajet DI-R can be used in any suitable bulk system for Roland printers. Additionally, a proven Marabu bulk (refillable cartridge) system is available which provides economic advantages beyond the improved handling.

### Quality characteristics

Marajet DI-R grants an excellent batch-to-batch quality within market-leading tolerances. It is filtered with a 1 µ filter and shows a very good stability against sedimentation which guarantees a shelf life of 12 months.

### Range and unit size

The DI-R range is available in 1 l-plastic containers:

- Marajet DI-R **429** Yellow
- Marajet DI-R **435** Light-Magenta
- Marajet DI-R **439** Magenta
- Marajet DI-R **455** Light-Cyan
- Marajet DI-R **459** Cyan
- Marajet DI-R **489** Black

### Cleaner Marajet DI-UR

In order to meet the reduced need for the “smaller” wide format segment, Marajet DI-UR Cleaner is offered in 1 litre units.

For a better handling, the well-known 5 litre metal can has also been replaced by the visually more pleasing plastic container.

For further details, please refer to our technical data sheet “Marajet DI-R“ available on [www.marabu-inks.com](http://www.marabu-inks.com)
